

Operation Analytics and Investigating Metric Spike

Project Description:

- Operation Analytics is the analysis done for the complete end to end operations of a company.
- With the help of this, the company then finds the areas on which it must improve upon. Investigating metric spike is also an important part of operation analytics.
- Data Analyst must be able to understand or make other teams understand the questions asked.

Tech Stack Used:

This project is executed using MySQL workbench.

Approach and Insights:

We have performed analysis using SQL to answer the questions to derive certain insights out of it and answer the questions asked by different departments.

Case Study 1 (Job Data)

Create database and table:

```
CREATE TABLE job_data
```

```
(  
  ds    VARCHAR(512),  
  job_id    VARCHAR(512),  
  actor_id  VARCHAR(512),  
  event VARCHAR(512),  
  language  VARCHAR(512),  
  time_spent VARCHAR(512),  
  org  VARCHAR(512)  
);
```

```
INSERT INTO job_data (ds, job_id, actor_id, event, language, time_spent, org) VALUES
```

```
  ('2020-11-30', '21', '1001', 'skip', 'English', '15', 'A'),  
  ('2020-11-30', '22', '1006', 'transfer', 'Arabic', '25', 'B'),  
  ('2020-11-29', '23', '1003', 'decision', 'Persian', '20', 'C'),  
  ('2020-11-28', '23', '1005', 'transfer', 'Persian', '22', 'D'),  
  ('2020-11-28', '25', '1002', 'decision', 'Hindi', '11', 'B'),  
  ('2020-11-27', '11', '1007', 'decision', 'French', '104', 'D'),  
  ('2020-11-26', '23', '1004', 'skip', 'Persian', '56', 'A'),  
  ('2020-11-25', '20', '1003', 'transfer', 'Italian', '45', 'C');
```

Number of jobs reviewed: Amount of jobs reviewed over time.

Your task: Calculate the number of jobs reviewed per hour per day for November 2020?

Query:

```
select ds,count(job_id) as jobs_per_day, sum(time_spent)/3600 as hours_spent,  
round(count(job_id)/(sum(time_spent)/3600),2) as no_jobs_hr_day  
from job_data  
where ds >='2020-11-01' and ds <='2020-11-30'  
group by ds ;
```

Output:

	ds	jobs_per_day	hours_spent	no_jobs_hr_day
▶	2020-11-30	2	0.011111111111111112	180
	2020-11-29	1	0.005555555555555556	180
	2020-11-28	2	0.009166666666666667	218.18
	2020-11-27	1	0.028888888888888888	34.62
	2020-11-26	1	0.015555555555555555	64.29
	2020-11-25	1	0.0125	80

The screenshot shows the MySQL Workbench interface. The 'Query' tab is active, displaying the SQL query. The 'Result Grid' shows the output of the query, which matches the table provided in the 'Output' section. The 'Navigator' on the left shows the database structure, including the 'job_data' table. The 'Information' panel at the bottom left shows the columns and data types for the 'job_data' table.

Read Only Context Help Snippets

Output

Action Output

#	Time	Action	Message
---	------	--------	---------

Throughput: It is the no. of events happening per second.

Your task: Let's say the above metric is called throughput. Calculate 7 day rolling average of throughput? For throughput, do you prefer daily metric or 7-day rolling and why?

Query:

```
with temp_table as(select ds ,count(job_id) as job_nums,sum(time_spent) as total_time
from job_data
group by ds)
select ds ,
sum(job_nums) over (order by ds rows between 6 preceding and current
row)/sum(total_time) as 7day_rolling_average
from temp_table;
```

Output:

ds	7day_rolling_average
2020-11-30	0.006711409395973154

The screenshot shows the MySQL Workbench interface. The SQL editor contains a query that defines a CTE named 'temp_table' and then calculates a 7-day rolling average of throughput. The query is as follows:

```
46 From job_data)select * from CTE where num >1 order by job_id;
47
48 #Throughput
49 with temp_table as(select ds ,count(job_id) as job_nums,sum(time_spent) as total_time
50 from job_data
51 group by ds)
52 select ds ,
53 sum(job_nums) over (order by ds rows between 6 preceding and current
54 row)/sum(total_time) as 7day_rolling_average
55 from temp_table;
56
57
```

The Results window shows the output of the query, which is a single row for the date '2020-11-30' with a 7day_rolling_average of 0.006711409395973154.

The Output window shows the execution progress of the query, including the time taken for each step and the number of rows returned.

Percentage share of each language: Share of each language for different contents.

Your task: Calculate the percentage share of each language in the last 30 days?

Query:

```
select language, count(language)*100/(Select count(*) from job_data) as lang_perc
```

```
from job_data group by language;
```

Output:

	language	lang_perc
▶	English	12.5000
	Arabic	12.5000
	Persian	37.5000
	Hindi	12.5000
	French	12.5000
	Italian	12.5000

The screenshot shows the MySQL Workbench interface. On the left, the 'SCHEMAS' pane shows a database named 'case_study_2' with a table 'job_data'. The 'job_data' table structure is listed below: Columns: ds (varchar(512)), job_id (varchar(512)), actor_id (varchar(512)), event (varchar(512)), language (varchar(512)), time_spent (varchar(512)), org (varchar(512)).

The main editor shows a SQL query:

```
31 round(count(job_id)/(sum(time_spent)/3600),2) as no_jobs_hr_day
32 from job_data
33 where ds >='2020-11-01' and ds <='2020-11-30'
34 group by ds ;
35
36 # Calculate the percentage share of each language in the last 30 days?
37 • select language, count(language)*100/(Select count(*) from job_data) as lang_perc
38 from job_data group by language;
39
```

The 'Result Grid' shows the output of the query:

	language	lang_perc
▶	English	12.5000
	Arabic	12.5000
	Persian	37.5000
	Hindi	12.5000
	French	12.5000
	Italian	12.5000

The 'Output' pane shows the execution log:

#	Time	Action	Message
30	18:43:51	select ds ,count(job_id) as job_nums,sum(time_spent) as total_time from job_data group by ds LIMIT 0, 1000	6 row(s) returned
31	18:45:47	with temp_table as(select ds ,count(job_id) as job_nums,sum(time_spent) as total_time from job_data group by ds)	1 row(s) returned
32	19:05:33	select ds ,count(job_id) as job_nums,sum(time_spent) as total_time from job_data group by ds	6 row(s) returned

Duplicate rows: Rows that have the same value present in them.

Your task: Let's say you see some duplicate rows in the data. How will you display duplicates from the table?

Query:

```
With CTE as (Select *,row_number()
```

```
Over (partition by job_id order by job_id) as num
```

From job_data)Select * from CTE where num >1 order by job_id;

Output:

	ds	job_id	actor_id	event	language	time_spent	org	num
▶	2020-11-28	23	1005	transfer	Persian	22	D	2
	2020-11-26	23	1004	skip	Persian	56	A	3

The screenshot shows the MySQL Workbench interface. The 'Query 1' window contains the following SQL code:

```
38 from job_data group by language;  
39  
40  
41 #Let's say you see some duplicate rows in the data. How will you display duplicates from  
42 With CTE as (Select *,row_number()  
43  
44 Over (partition by job_id order by job_id) as num  
45  
46 From job_data)Select * from CTE where num >1 order by job_id;
```

The 'Result Grid' shows the output of the query:

ds	job_id	actor_id	event	language	time_spent	org	num
2020-11-28	23	1005	transfer	Persian	22	D	2
2020-11-26	23	1004	skip	Persian	56	A	3

The left sidebar shows the 'SCHEMAS' tree with 'case_study_2' selected. The 'Table: job_data' is highlighted, showing its columns and data types.

Case Study 2 (Investigating metric spike)

User Engagement: To measure the activeness of a user. Measuring if the user finds quality in a product/service.

Your task: Calculate the weekly user engagement?

Query :

SELECT week(occurred_at) as week_num,

COUNT(DISTINCT user_id) AS weekly_active_users

FROM events1

WHERE event_type = 'engagement'

AND event_name = 'login'

GROUP BY 1

ORDER BY 1 ;

Output :

week_num	weekly_active users
17	663
18	1068
19	1113
20	1154
21	1121
22	1186
23	1232
24	1275
25	1264
26	1302
27	1372
28	1365
29	1376
30	1467
31	1299
32	1225
33	1225
34	1204
35	104

The screenshot shows a SQL IDE interface with a query editor and a results grid. The query is as follows:

```

1 #User Engagement:
2 SELECT week(occurred_at) as week_num,
3        COUNT(DISTINCT user_id) AS weekly_active_users
4 FROM events1
5 WHERE event_type = 'engagement'
6        AND event_name = 'login'
7 GROUP BY 1
8 ORDER BY 1;

```

The results grid displays the following data:

week_num	weekly_active_users
17	663
18	1068
19	1113
20	1154
21	1121
22	1186
23	1232
24	1275
25	1264
26	1302
27	1372

The bottom panel shows the output log with the following entries:

#	Time	Action	Message
76486	15:46:04	SELECT week(occurred_at) AS weeknum, COUNT(DISTINCT e.user_id) AS weekly_users, COUNT(...	19 row(s) returned
76487	15:51:37	SELECT week(occurred_at) AS weeknum, COUNT(DISTINCT e.user_id) AS weekly_users FROM ev...	Error Code: 1054. Unknown column 'e.user_id' in field list'
76488	15:51:57	SELECT week(occurred_at) AS weeknum, COUNT(DISTINCT user_id) AS weekly_users FROM eve...	19 row(s) returned
76489	15:53:21	SELECT week(occurred_at), COUNT(DISTINCT user_id) AS weekly_active_users FROM events1 WHE...	19 row(s) returned
76490	15:55:26	SELECT week(occurred_at) as week_num, COUNT(DISTINCT user_id) AS weekly_active_users FROM ...	19 row(s) returned

User Growth: Amount of users growing over time for a product.

Your task: Calculate the user growth for product?

Query:

select monthofyear,num_users,prev_month_users,

concat(round((num_users-prev_month_users)*100/prev_month_users,0),'%')
growth_percent from

(select monthofyear,num_users,

lag(num_users,1,0) over (order by monthofyear) prev_month_users from

(select month(created_at) as monthofyear,

count(*) as num_users

from users3

group by 1

order by 1) t)g;

Output:

	monthofyear	num_users	prev_month_users	growth_percent
▶	1	1415	0	NULL
	2	1382	1415	-2%
	3	1614	1382	17%

Weekly Engagement: To measure the activeness of a user. Measuring if the user finds quality in a product/service weekly.

Your task: Calculate the weekly engagement per device?

Query :

SELECT week(occurred_at) AS weeknum,

COUNT(DISTINCT user_id) AS weekly_users,

device

```

FROM events1

WHERE event_type = 'engagement'

AND event_name = 'login'

GROUP BY weeknum, device

ORDER BY 1 ;

```

Output:

week_nam	weekly_users	device
